

Cloud Computing - Smart Study Notes & Flashcards

Cloud Computing is the delivery of computing services such as storage, servers, databases, networking, and software over the internet. It helps users access resources anytime without maintaining physical hardware.

What is Cloud Computing?

Cloud Computing provides computing services through the internet.

What is IaaS?

Infrastructure as a Service provides virtual infrastructure resources.

What is PaaS?

Platform as a Service provides a platform for developers to build applications.

What is SaaS?

Software as a Service provides software applications online.

Advantages of Cloud Computing

Scalability, remote access, cost efficiency, automatic updates, and backup recovery.

Popular Cloud Providers

AWS, Microsoft Azure, and Google Cloud Platform are popular cloud providers.

Cloud Deployment Models

Public Cloud, Private Cloud, and Hybrid Cloud are common deployment models.

What is Virtualization?

Virtualization creates virtual versions of resources and systems.

Applications of Cloud Computing

Cloud Computing is used in data storage, web hosting, machine learning, and backup systems.

Service Model	Purpose
IaaS	Infrastructure Resources
PaaS	Development Platform
SaaS	Software Applications
